NTS 4.2

Trident Micro Systems' release of NTS 4.2 is the most significant enhancement to PassPort yet! The result of years of development, NTS 4.2 takes your NTS network to the next level of performance and functionality.

■ ***Optional Features***

With NTS 4.2 you are able to add optional mission critical and data features to your system including **Emergency Declaration**, **Channel Backup** and **Priority Access**. NTS 4.2 enabled systems also provide the ability to select operation in either transmission or message trunking modes on a per talk-group basis.

■ ***TMS Data Option Support***

NTS 4.2 supports Trident Micro Systems TMS Data option which includes support for automatic vehicle location, mapping, reporting, and telemetry data applications. In addition to these significant optional features, you'll enjoy an upgraded release of NTS Commander and a host of other enhancements found throughout the network.

■ ***Installation Requirements***

Installing and operating NTS 4.2 (and later versions) require the use of Trident's NTS Master Card II.

In order to take advantage of the NTS Channel Backup option an NTS Dual Channel Card version 1.6 (or later), running in Enhanced mode is required for channels that are to be backed up. The NTS Data option requires a 1.7 (or later) NTS Dual Channel Card.

■ ***Free Download***

NTS 4.2 is available for download, free of charge, to all Trident Micro Systems' NTS QSP subscribers. Please contact Trident Tech Support for download and upgrade instructions. Options for NTS 4.2 may be purchased directly from Trident Micro Systems sales. Arrange for your upgrades and downloads today!
